SUMMARY

Cybersecurity graduate with hands-on experience configuring FortiGate firewalls, implementing IPSec VPNs, firewall policies, NAT, VLANs, and monitoring network security logs during a Network Security internship. Certified in cybersecurity fundamentals with strong knowledge of TCP/IP, network security, endpoint protection, and threat management. Seeking an entry-level Cybersecurity Analyst, SOC Analyst, or Network Security Engineer position.

EDUCATION

Bachelor's of Computer Application (BCA) - Specialized in AIML

08/2023 – 04/2026

Vellore Institute of Technology

Vellore

Graduated with a CGPA of 7.67/10, gaining knowledge in Artificial Intelligence, Machine Learning, Computer Networks, Database Management Systems, Programming, and Software Development.

PROFESSIONAL EXPERIENCE

Network Security Intern

07/2026 – 08/2026

Secure Solutions

Kochi

- Installed, configured, and managed FortiGate firewalls to secure enterprise network infrastructure.
- Configured firewall policies, NAT, VLANs, and IPsec VPNs for secure network communication.
- Implemented security features including Intrusion Prevention System (IPS), Web Filtering, Antivirus, and Application Control.
- Monitored firewall logs, analyzed security events, and applied network security best practices to strengthen overall security.

Web UI Development Intern

06/2025 – 06/2025

Techgentsia Software Technologies Pvt. Ltd.

Infopark Pallipuram

- Assisted in developing and implementing responsive web user interfaces.
- Collaborated with development teams to support front-end design and testing activities.

SKILLS

- Network Security
- Firewall Management (FortiGate)
- TCP/IP
- VLAN
- NAT
- VPN
- Linux
- Wireshark
- Nmap
- Python
- Git & GitHub

PROJECTS

Fake job posting detection using machine learning and NLP

Developed an intelligent fraud detection system to classify job postings as genuine or fraudulent using Machine Learning and Natural Language Processing (NLP). Implemented text preprocessing, feature extraction using TF-IDF and CountVectorizer, and trained classification models to accurately detect suspicious job listings. Evaluated model performance using accuracy, precision, recall, and F1-score to improve reliability in identifying online recruitment scams.

Tech Stack: Python, Scikit-learn, Pandas, NumPy, NLTK, TF-IDF, CountVectorizer, Machine Learning, Natural Language Processing (NLP), Matplotlib, Seaborn, Jupyter Notebook, Model Evaluation (Accuracy, Precision, Recall, F1-Score).

Vulnerability Scanner using Python

Developed a Python-based Vulnerability Scanner to identify security weaknesses and exposed services on target systems. Implemented automated host discovery, port scanning, service enumeration, and vulnerability checks against common misconfigurations and insecure services. Generated detailed scan reports to assist in vulnerability assessment, risk identification, and network security analysis.

Tech Stack: Python, Nmap, Python-Nmap, Socket Programming, TCP/IP, Linux, Threading, JSON, CSV, Git

Network Traffic Analyzer using Python

Developed a Python-based Network Traffic Analyzer to monitor and analyze network communications in real time. Implemented packet inspection and protocol analysis to identify TCP, UDP, ICMP, DNS, and HTTP traffic patterns. Generated traffic statistics and reports to assist in network monitoring, anomaly detection, and security analysis.

Tech Stack: Python, Scapy, Pandas, Matplotlib, Socket Programming, TCP/IP, Wireshark, Linux, CSV, Git

AI Threat Detection System

Developed a Python-based AI Threat Detection System to automate the identification and classification of potential cybersecurity threats from network traffic and security data. Implemented data preprocessing, feature extraction, anomaly detection, and machine learning algorithms to detect suspicious activities, malicious behavior, and potential security incidents. Generated real-time threat alerts, risk assessments, and analytical reports to support proactive threat monitoring and incident response.

Tech Stack: Python, Scikit-learn, Pandas, NumPy, Machine Learning, Anomaly Detection, Feature Engineering, Streamlit, Matplotlib, JSON, CSV, Git, GitHub, Security Analytics
